- GIT.
- Code debugging.
- Analytical thinking.
- Georgian (Native Language).
- English (Full Professional Proficiency).
- Jira / Trello.
- Material UI, Mantine, Shadcn Tailwind, Styled-Components.

## ACTIVITIES

I have worked on various projects and developed different complex tasks from authentication to improving already existed legacy code.

Cybertv was the most challenging project and while working on it I've faced some difficulties. The most valuable Achievement was implementing an authentication (JWT). On top of that I have also developed an admin panel to manage the app. The rest of the contribution was in basic development such as creating components and different functionalities.

University of Georgia Research Portal was second project where I used previous experience and provided improved functionality. There were many components that required Forms in different ways therefore I had to work a lot with forms as well as basic development.

NYSTA – I have started as a Junior at Nysta and had an opportunity to test my knowledge and learn new skills with amazing team around. My main contribution was in Payment systems and user authorization.
